

Health and Safety

Spectrolite protective eye and face wear reduces eye fatigue and irradiance at the eyes and face from most sources to levels below the maximum recommended in NIOSH document HSM 73-11009. The UVS-30 spectacles and UVG-50 goggles are well proportioned to fit easily over regular eyeglasses. Adjustable to fit all sizes, the UVF-80 face shield has a visor that can be pivoted off the face. Both the goggles and face shield meet ANSI specification Z87.1 for safety eye wear and OSHA standard 1910.133 for eye and face protection.
